

SMARTBoard Lunch Count and Opening

Description: After receiving SMARTBoard professional development, I took my obtained knowledge and created some SMARTBoard activities to integrate in the classroom. These pictures showcase the lunch count and weather man portion of the opening calendar activities that were developed.

Impact: Creating different SMARTBoard activities allows my students to learn interactively and participate in the lessons. They are more excited to come up to the board and answer questions and show off their skills and knowledge. Having the ability to create different activities allows me to focus on certain skills and content, as well as use the already provided resources.

Intent: I intend to continue creating and sharing SMARTBoard activities throughout the school year and integrate them into my classroom.
